Click the small images above for larger photos.

As of Saturday 26-Aug-06 this radio is available at branches of Superdrg in the Summer Sale, priced £1.99

Opening the radio: To open the radio remove the screw under the flap on the centre of the rear of the radio, then prise open the two halves of the radio carefully using a screwdriver. The plastic chassis holding the circuit board can be removed by unscrewing two screws which are at either end of the battery compartment. The frequency counter/clock board is secured by three screws.

Chipset: This radio contains an 8-pin D2822M and 16-pin CD2003 chip. Both are DIP and there do not appear to be any surface mount components on the main radio PCB. I believe the datasheets are:

[TA2003 DATASHEET](#)

[D2882 DATASHEET](#)
